		Avg. Number of Prints/Ink Set	1040	1114	975

The ink cost analysis is based on actual ink usage, using the specified type of paper and print mode with the printer driver under conditions stated below. This analysis is based on the printer's job log report on the amount of ink consumed to print. The media cost analysis is based on square footage from the size of the paper using roll feed paper except Fine Art Bright White 330gsm (Cut Sheet) and all of media used in 13"x19" analysis, which list per-sheet cost. The total cost is a sum of the cost of ink consumed and the media cost including any waste to print one complete print, and does not include the cost of other customer replaceable items such as a print head, a cutter, and a maintenance cartridge. The average number of prints per ink set represents the average number of prints that can be printed with a set of twelve 130ml ink cartridges. All cost information has been rounded up to two decimals and therefore, is not exact and should be used as a conservative estimate. All prices used in this analysis are based on MSRP in U.S. dollars as of August 2006. This document is created in August 2006, and specifications are subject to change without notice. All samples are printed under the following conditions: OS: Mac OS X 10.3.9, CPU: PowerPC G5 1.6GHz, RAM: 1GB, Application: Adobe Photoshop 7.0, Interface: 10/100 Base-TX, Driver: Print Plug-in for Photoshop v2.01 (Media Configuration Tool v2.0 applied), Rendering Intent: Relative Colorimetric, Print Mode: 2400x1200 dpi, 16-pass mode. (highest quality)
